Radiology Report

EXAM: MR Shoulder wo Con Rt

EXAM DATE: 10/17/2023 1:52 PM PDT

INDICATION: Prior history of shoulder surgery with pain and limited range of movement

IMAGING TECHNIQUE: Axial T1 and FSE T2 fat-suppressed sequence. Paracoronal and parasagittal proton density and FSE T2 fat-suppressed sequences.

COMPARISON: Preoperative MRI right shoulder joint dated 5/14/2020

FINDINGS:

ROTATOR CUFF:

Moderate supraspinatus tendinosis with approximately 0.9 cm AP by 1.2 cm transverse partial-thickness articular surface tear of its distal anterior fibers without tendon retraction or muscle atrophy.

Mild infraspinatus tendinosis without tendon tear, retraction or muscle atrophy.

Teres minor tendon is intact.

Mild subscapularis tendinosis with tendon thinning although remains anchored to the humeral head without retraction. Mild decrease of subscapularis muscle bulk.

LONG HEAD OF THE BICEPS: A note is made of long head of biceps tenodesis.

Seasonal allergies

Sinusitis

Sore throat

Spasm of muscle, back

Status post arthroscopy of right shoulder

Tendinosis of right rotator cuff

Thinning hair

Trochanteric bursitis of both hips

Vaginal dryness, menopausal

Vitamin d deficiency

Weakness of right arm

Historical

MILLS DIXON, ANGELA DENISE - 0000112966(AMB)

* Final Report *

Blunted superior labrum likely suggesting postsurgical changes.

GLENOID LABRUM / GLENOHUMERAL JOINT: Mild fraying of the posterior inferior labrum. Anterior inferior labrum is intact.

ROTATOR INTERVAL AND JOINT CAPSULE: No significant joint effusion. No intracapsular loose body.

ACROMIOCLAVICULAR JOINT: Moderate degenerative hypertrophic change acromioclavicular joint with anterior and inferior downsloping of acromion reducing the outlet space for cuff tendons. Clinical correlation for rotator cuff impingement.

SUBACROMIAL SUBDELTOID BURSA: No subacromial or subdeltoid bursal effusion.

OSSEOUS STRUCTURES / BONE MARROW: Glenohumeral alignment is preserved without fracture or marrow edema. No intracapsular loose bodies identified.

IMPRESSION:

1. Moderate supraspinatus tendinosis with approximately 0.9 cm AP by 1.2 cm transverse partial-thickness articular surface tear of its distal anterior fibers without tendon retraction or muscle atrophy. Mild infraspinatus tendinosis without tendon tear. Teres minor tendon is intact.
2. Mild subscapularis tendinosis with tendon thinning although it remains anchored to the humeral head without retraction. Mild decrease of muscle bulk.
3. Long head of biceps tenodesis. Postsurgical changes superior labrum. Mild fraying of the posterior inferior labrum. Anterior inferior labrum is intact. No acute labral tear or para labral cyst.
4. Moderate degenerative hypertrophic change acromioclavicular joint with anterior and inferior downsloping of acromion reducing the outlet space for cuff tendons. Clinical correlation for rotator cuff impingement. No subacromial or subdeltoid bursal effusion.
5. Glenohumeral alignment is preserved without fracture or marrow edema.

Teres minor tendon is intact.

Mild subscapularis tendinosis with tendon thinning although remains anchored to the humeral head without retraction. Mild decrease of subscapularis muscle bulk.

LONG HEAD OF THE BICEPS: A note is made of long head of biceps tenodesis. Blunted superior labrum likely suggesting postsurgical changes.

GLENOID LABRUM / GLENOHUMERAL JOINT: Mild fraying of the posterior inferior labrum. Anterior inferior labrum is intact.

ROTATOR INTERVAL AND JOINT CAPSULE: No significant joint effusion. No intracapsular loose body.

ACROMIOCLAVICULAR JOINT: Moderate degenerative hypertrophic change acromioclavicular joint with anterior and inferior downsloping of acromion reducing the outlet space for cuff tendons. Clinical correlation for rotator cuff impingement.

SUBACROMIAL SUBDELTOID BURSA: No subacromial or subdeltoid bursal effusion.

OSSEOUS STRUCTURES / BONE MARROW: Glenohumeral alignment is preserved without fracture or marrow edema. No intracapsular loose bodies identified.

IMPRESSION:

1. Moderate supraspinatus tendinosis with approximately 0.9 cm AP by 1.2 cm transverse partial-thickness articular surface tear of its distal anterior fibers without tendon retraction or muscle atrophy. Mild infraspinatus tendinosis without tendon tear. Teres minor tendon is intact.

2. Mild subscapularis tendinosis with tendon thinning although it remains anchored to the humeral head without retraction. Mild decrease of muscle bulk.

Assessment/Plan

1. Pre-op exam Z01.818

Patient presents today for preoperative evaluation for upcoming right shoulder revision arthroscopic versus open rotator cuff repair subacromial decompression, debridement, acromioplasty, distal clavicle excision and possible revision of biceps tenodesis date of surgery 3/7/2024 with Dr. Bragg.

Patient to be NPO after midnight prior to surgery. The patient may take medications that are necessary with just a sip of water the morning prior to surgery. Preoperative topical prep has been reviewed, patient to follow facility instructions. Discontinue any NSAIDS, ASA, garlic, ginkgo biloba and fish oils 7 days prior to surgery. Expected course for surgery, post op recover and hospital stay if applicable reviewed. All questions answered. Bowel care post operatively while taking opiates were reviewed.

Surgical risks and benefits were discussed in full detail with patient. These risks included but were not limited to; death, stroke, PNA, PE, DVT, bleeding, infection, nerve injury, stiffness, lack of relief and need for further surgery. Patient expressed full agreement of this plan and is wishing to proceed surgery at this time.

Patient will be provided with prescription for Norco 10-325mg Risks and benefits and possible complications/side effects of opiate use was reviewed.

Supervising Physician: Dr. Bragg

Indication for Surgery

The patient is a 67-year-old female status post prior right shoulder arthroscopy. Due to ongoing symptoms and pain and disability as well as imaging evidence of a prominent screw, surgery was indicated.

I went over the surgical risks in detail and these risks included but were not limited to: death, stroke, PNA, PE, DVT, bleeding, infection, nerve injury, stiffness, lack of relief and need for further surgery. The patient indicated understanding and agreement with this and expressed desire to proceed.

—

Findings

PASTA, AC joint arthritis, prominent biceps tenodesis screw [4]

Operative and Procedure Reports

Complications

None

Procedure Details

The patient was identified preoperatively. Informed consent was obtained. The surgical site was marked. The patient was transported to the operating room and an interscalene block was performed. The patient was placed under general endotracheal anesthesia. The patient was draped and prepped in the usual sterile fashion in the beach chair position with all bony prominences well-padded. The patient received preoperative antibiotics. A time-out was performed.

The procedure was begun with establishment of anterior and posterior portals for diagnostic arthroscopy. Diagnostic arthroscopy showed mild cartilaginous scuffing of the humeral head. There is a high-grade PASTA lesion. There had been prior biceps tenotomy and extra-articular tenodesis.

First, an extensive intra-articular debridement was performed utilizing the shaver. Degenerative fraying of the labrum was debrided utilizing the shaver. The rotator interval was debrided of thickened anterior capsular tissue utilizing a shaver. Undersurface fraying of the supraspinatus was debrided with a shaver.

The supraspinatus footprint was prepared utilizing the shaver and rasp. I then entered the subacromial space. Dense and inflamed subacromial bursal tissue was encountered. An extensive subacromial decompression utilizing the shaver and ablation wand was performed. Examination of the rotator cuff showed that there was no bursal sided tear. I returned to the intra-articular space to proceed with a PASTA bridge repair. Utilizing a percutaneous technique, two medial row FiberTack anchors were placed.

I then reentered the subacromial space. An accessory portal with a passport was established. Utilizing a shuttling technique, I performed a double pulley technique x2, centrally cinching the rotator cuff down. With the shoulder in abduction and external rotation the suture ends were then taken to a lateral row swivel lock with excellent compression of the rotator cuff back to the footprint from the subacromial space. I used a 5.5 mm anchor due to the patient's soft bone quality. I reentered the intra-articular space and confirmed restoration of the rotator cuff back to the footprint with repair of the rotator cuff at its insertion.

Next, I moved to the arthroscopic distal clavicle excision. Anterior and superior accessory portals as well as a lateral portal were used to perform the arthroscopic distal clavicle excision. The burr and power rasp were used to open the acromioclavicular space by resecting the lateral aspect of the clavicle. A medial acromioplasty was performed. Intervening soft tissue was removed with a shaver. Range of motion was performed to ensure that there is adequate opening of the joint following the resection. There is no evidence of impingement.

This completed the intra-articular and subacromial portions of the procedure. All instruments were withdrawn from the shoulder. Excess fluid was removed.

An anterior incision was made for the approach to the proximal humerus overlying the prior biceps tenodesis. Sharp dissection was carried down. Abundant scar tissue was encountered encapsulating the prominent screw. There is significant scar tissue around the biceps tendon. It appeared the biceps tendon was actually fixed into the proximal humerus more proximally as probing showed there is proximal extent of the tendon which was firmly adherent to the bone. However the more distal screw appeared to be partially compressing the tendon but had backed out significantly. It was removed in its entirety. The curette and Freer were used to debride the screw hole. I use electrocautery to remove much of the abundant scar tissue. The biceps tendon was extensively probed at this point. With significant force it was clear that was firmly fixed and that revision tenodesis with an anchor was not necessary as it was intact. Copious irrigation was used. The incision was closed in a layered fashion with 2-0 Vicryl followed by Monocryl and skin adhesive. The portal sites were closed with nylon sutures. A dry, clean, and sterile dressing was placed and the patient was placed into a sling. The patient was extubated and transported to the PACU in stable condition.

PRE-ANESTHESIA INDUCTION GUIDELINES. Please review pre-anesthesia induction guidelines before proceeding with induction.

- Suction is working.
- Anesthesia workstation can provide ventilation with 100% oxygen under positive pressure.
- Upper airway status has been evaluated.
- Backup airway devices are immediately available.
- Patient's significant drug allergies and possible drug interactions noted.
- NPO status and aspiration risk confirmed.
- Monitors are functioning with appropriate waveforms.
- Audible and visual alarms are set appropriately.
- Intravenous access (if indicated) is appropriate and functioning.
- Special considerations for this patient confirmed (eg: increased risk for operating room fire, surgical positioning requirements.
- Goals for blood pressure and/or heart rate management).

- Opioids given intraoperatively and whose effects extend into the PACU or post-operative period, or opioids given in the PACU, or opioids given after discharge from the PACU

Pediatric Risk Factors for PONV

- Age ≥ 3 years
- Surgery ≥ 30 minutes
- Strabismus surgery
- History of POV or PONV in parent or sibling

Serious Adverse Event

- | | |
|---|--|
| <ul style="list-style-type: none"> • Death • Myocardial Infarction • Malignant hyperthermia • Cerebral Vascular Accident • Visual loss • Unplanned ICU admission • Unrecognized difficult airway • Dental trauma • Vascular access complication (PTX or vascular injury) • Infection following epidural or spinal anesthesia • High spinal • Major systemic local anesthetic toxicity • Infection following peripheral nerve block | <ul style="list-style-type: none"> • Cardiac arrest • Anaphylaxis • Transfusion reaction • Coma • Operation on incorrect site or incorrect patient • Medication error • Intraoperative awareness • Re-intubation • Peri-operative aspiration • Pneumothorax following attempted vascular access or regional anesthesia • Epidural hematoma following spinal or epidural anesthesia • Post-dural puncture headache • Peripheral neurologic deficit following regional anesthesia |
|---|--|

Maximal Sterile Barrier Technique Includes All of the Following:

- | | |
|---|---|
| <ul style="list-style-type: none"> • Cap • Sterile gown • Large sterile sheet • Hand hygiene by either washing hands with conventional antiseptic containing soap and water or with waterless alcohol-based gels or foams | <ul style="list-style-type: none"> • Mask • Sterile gloves • Sterile gel and sterile probe covers (if ultrasound was utilized) • 2% chlorhexidine for cutaneous antisepsis, tincture of iodine, an iodophor, or 70% alcohol |
|---|---|

STOP-BANG SCREENING

- | | |
|--|--|
| Do you snore loudly? | Do you often feel tired, fatigued, or sleepy during the daytime? |
| Has anyone observed you stop breathing while asleep? | Do you have high blood pressure? |
| Are you obese/very overweight – BMI more than 35 kg/m ² ? | Age over 50 years? |
| Neck Circumference >16 inches? | Male? |

TOTAL SCORE:

If YES to 0-2, low risk of sleep apnea	Low
If YES to 3-4, intermediate risk of sleep apnea	Intermed
If YES to 5-8, high risk of sleep apnea	High

Peripheral Nerve Block Procedure Note

Age: 367

Weight: 77kg

ASA: 3

Allergies: morphine

Surgery: Right axillary rotator cuff repair Block Performed: interscalene

Indication for Block:

☒ Surgical Anesthesia

☒ Postoperative Pain Control, requested by Dr. Bragg

Surgical Side:

☐ Left

☒ Right

Surgical Site:

Shoulder

Anesthesia Consent:

☒ The risks, benefits, and alternative to block were discussed with the patient. All questions were answered. The patient appeared to understand and wished to proceed.

☒ Postoperative care of a numb/weak extremity was discussed with patient

Timeout/Laterality Check:

☒ Performed at: (11 : 11)

Performed with: Stacey Schettine

Date: 3/19/24

Block Begin: (11 : 12)

Block End: (11 : 15)

Patient Position:

☒ Supine

☐ Prone

☐ LLD

☐ RLD

☐ Sitting

☐ Other

ASA Monitors:

☒ BP

☒ EKG

☒ O₂ Sat

☐ SpO₂ / SpHb

☐ Resuscitation Equipment

Premedication:

100mg fentanyl

Aseptic Technique:

☐ Povidone-iodine

☒ Chlorhexidine

☒ Sterile Gloves

☐ Sterile Drape

Technique:

☒ Single Injection

☐ Catheter (depth at skin _____ cm)

Needle:

☐ 2' 22G

☒ 4' 22G

☐ 18G Tuohy

☐ Other _____

Monitoring:

☒ Ultrasound

☐ Nerve Stimulation

☐ Injection Resistance (Pressure)

Transducer: Curved

Linear

In Plane

Out of Plane

See Reverse for Image

Motor Response (Specify)	Min. Current (mA) before injection	Ultrasound Image Quality	Local Anesthetic	Concentration (%)	Volume (mL)	Additives
		<input checked="" type="checkbox"/> Clear	Bupivacaine	0.5	15	<input type="checkbox"/> Epinephrine 1/100,000
		<input type="checkbox"/> Poor	Ropivacaine			<input type="checkbox"/> Decadron
			Mepivacaine			<input type="checkbox"/> Clonidine
			Lidocaine			<input type="checkbox"/> Other
			Exparel			

Incremental Injection?

☐ No

☒ Yes, 2-5 ml after negative aspirations

Blood Aspirated?

☒ No

☐ Yes

IV Test using epinephrine

☐ Negative

☐ Positive

Pain/Paresthesia on Injection

☒ No

☐ Yes

Resistance on Injection

☒ Normal (<15 psi)

☐ High (>15 psi)

Notes

Events:

☒ Uneventful

☐ Other

Block Success:

☒ Complete

☐ Partial

☐ Failed

☐ Aborted

Post Procedure:

☒ Awake

☒ Comfortable

☐ Anesthetized

Assessment Documentation

DOCUMENT NAME:	OP Post Procedure - Text
RECEIVED DATE/TIME:	3/19/2024 13:52 PDT
RESULT STATUS:	Modified
PERFORM INFORMATION:	Brinzei, Ciprian RN (3/19/2024 13:52 PDT)
SIGN INFORMATION:	Brinzei, Ciprian RN (3/19/2024 15:27 PDT); Brinzei, Ciprian RN (3/19/2024 13:52 PDT)

OP Post Procedure Entered On: 03/19/2024 13:54 PDT
Performed On: 03/19/2024 13:52 PDT by Brinzei, Ciprian RN

Post Procedure

Post Procedure Teaching : Done
Disposition : Home/Self care
Mode of Discharge : Wheelchair
Accompanied : Staff member
Discharge Criteria : Pt alert/oriented, Pt vital signs stable or WNL, Pt has good motor control, Dressing dry, No unusual bleeding, Pt has driver to escort home, IV discontinued/tip intact
Discharge Instructions : Activity, Diet, Discharge medications, Follow-up appointment, MD Specific Instructions, Pain management, What to do if symptoms worsen, Fall risk
Understanding voiced by : Patient, Family
Clinical Discharge Time : 03/19/2024 15:30 PDT
PACU Departure Time : 03/19/2024 15:30 PDT
PACU Clinical Minutes : 112 min
PACU Total Minutes : 112 min

Brinzei, Ciprian RN - 03/19/2024 15:27 PDT

Actual Name of Procedure : see iview
Return from : OR
PACU Arrival Time : 03/19/2024 13:38 PDT
Anesthesia Given : General, Regional Block
Transported : Guernsey
Airway Status (PACU) : Patent
Surgeon Name : Bragg, William E MD
Anesthesiologist Name : Wong, Michael MD
Lung Sounds : clear
Skin Color : Normal
Skin Temperature : Warm
Skin/Wound Location #1 : right shoulder
Wound Drainage : Clear
Post Procedure Dressings : Clean, Dry, and Intact
IV Site Condition : Intact
Bed Position : HOB elevated
Tolerating PO Fluids : 03/19/2024 13:54 PDT

Anesthesia and Invasive Monitoring Informed Consent Form

Anesthesia services are needed in order to perform your operation or procedure. Your anesthesia service provider will work with you, your surgeon, and others involved in your care to customize an anesthesia plan for you. The anesthesia plan may change in order to respond to events that happen during the procedure.

ANESTHESIA OPTIONS

Listed below are general risks of all types of anesthesia, as well as the specific risks of particular anesthesia methods and procedures which may be used alone or in combination with each other to provide your care.

Possible Side Effects/Complications of All Anesthesia

Nausea/vomiting, itching, anxiety, blood clots (rare), depressed breathing, awareness/recall of surgical events, heart attack (rare), stroke/brain injury (rare), paralysis (rare), death (rare), mental effects, such as confusion or hallucinations (rare and usually temporary but may be permanent). In addition, possible side effects/complications of each specific anesthesia option are listed below. Please note, however, that **any medication can cause an allergic reaction, and the severity of an allergic reaction varies per person.**

☒ **General Anesthesia (GA)**

- *Description* – The patient is unconscious from drugs that are inhaled and/or given by IV. Its purpose is to make you completely comfortable and allow the surgeon to perform the operation. Usually an airway device is needed to maintain normal respiratory function and you will be monitored closely.
- *Side Effects/Complications (include but not limited to)* - Mouth and/or throat discomfort or damage, awareness/recall of surgical events, malignant hyperthermia (a life-threatening disease causing abnormally high temperature), damage to teeth, aspiration, pneumonia.

☒ **Regional Anesthesia (RA)**

Spinal or Epidural Anesthesia

- *Description* - An anesthetic drug is injected through a needle/catheter placed directly into the fluid of the spinal canal or immediately outside the spinal canal.
- *Side Effects/Complications (include but not limited to)* - Blood pressure changes, mild backache, headache for 1-3 days, tingling in one or both legs, infection (rare), bleeding/bruising (rare), persistent or permanent (very rare) nerve injury, patchy or insufficient pain relief, possible interference with breathing that requires oxygen or a breathing tube (rare), fever, catheter tube breakage.

Peripheral Nerve Block

- *Description* – Local anesthetics are injected (by single-injection or continuous catheter) around specific peripheral nerves and/or nerve plexuses to produce decreased sensation and/or decreased motor control.
- *Side Effects/Complications (include but not limited to)* – Patchy or partial block, bruising, infection, damage to blood vessels/nerves/and/or muscle, lung collapse (only with some types of blocks), rapid absorption of local anesthetic into the bloodstream, which can lead to seizures, nerve damage, cardiac arrest, and/or death.

Intravenous Regional Anesthesia

- *Description* - Anesthetic drug is injected into veins of the arm or leg while using a tourniquet.
- *Side Effects/Complications (include but not limited to)* - Seizure

☐ **Monitored Anesthesia Care (MAC)**

- *Description* - Your anesthesia provider will provide sedation, pain relief and monitor you closely. You may have some awareness of what is happening, anxiety and/or discomfort depending on the procedure.

If MAC or RA is deemed inadequate, conversion to GA may be necessary.

Anesthesia and Invasive Monitoring Informed Consent Form

INVASIVE MONITORING PROCEDURES

Your physician may need to utilize invasive monitoring (i.e., monitoring that requires inserting something into your body) for your care to potentially improve your medical management and clinical results.

Possible Side Effects/Complications of Invasive Monitoring

Inflammation, pain, bleeding/bruising, infection, artery or vein damage (rare), air embolism (air bubble that can travel to the lungs, heart, or brain, causing damage or death), catheter embolism (loss of the catheter tip into the bloodstream), lack of sufficient blood flow, oxygen and/or tissues/nerve damage, blood clot formation.

Arterial Catheter	<i>Description</i> – A catheter is inserted into an artery to allow for continuous blood pressure monitoring and to obtain blood sampling.
Central Venous Catheter	<i>Description</i> - A catheter is inserted into a large vein to administer fluids, medications or nutrition, monitor you closely, and obtain blood sampling. Specific side Effects/Complications include fluid/blood around the heart, damage to the lung or thoracic duct (rare), abnormal heart rhythm

By signing this anesthesia consent form, **YOU ATTEST THAT YOU HAVE READ THIS INFORMATION AND CONSENT FORM AND THAT YOUR CARE HAS BEEN DISCUSSED WITH YOU.**

1. I acknowledge that I have read this Anesthesia Information and Consent or had it read to me. The specific types, benefits, risks, and options for anesthesia were explained to me in terms that I can understand. I attest that I understand the risks, benefits and alternatives of anesthesia services that are being offered.
2. I acknowledge that I had ample time to ask questions and consider my decisions and that all of my questions have been answered to my satisfaction. I understand that I may withdraw my consent at any time.
3. I understand the decisions concerning my anesthesia care are based upon the surgery and the health information I have provided. I acknowledge that the information provided by me about my medical history, allergies, habits (e.g. tobacco, alcohol and drug use), and medications is current and true to the best of my knowledge. No promises or guarantees have been made to me about the outcome of these procedures.
4. I understand that in order to provide safe anesthesia care, it may be necessary for my anesthesia provider to place invasive lines including central lines or arterial lines as described above.

I, Mills Dixon, Angela (PATIENT NAME), hereby authorize, consent, and direct
Vibhu (ANESTHESIA PROVIDER/GROUP), along with the associates or assistants of their choosing, all of whom are credentialed or otherwise authorized to provide or assist in anesthesia services at this facility, to administer anesthesia, and to the use of such anesthetics as may be deemed necessary.

1. **Operation or Procedure to be performed.** Your doctors have recommended the following operation(s) or procedure(s): right shoulder revision arthroscopic versus open surgery with rotator cuff repair, subacromial decompression, debridement, acromioplasty, distal clavicle excision, possible revision biceps tenodesis
2. **Primary Surgeon.** Dr. Braga is your primary surgeon. The primary surgeon is the doctor who will perform your operation or procedure. The primary surgeon is an independent practitioner and is not an employee, representative or agent of the Hospital.

With your permission, your primary surgeon will perform the operation or procedure named above. During your surgery, if your primary surgeon believes that other procedures are needed for your health or safety, those other procedures will be performed at his or her discretion. If your primary surgeon cannot perform or complete the operation, a trained substitute surgeon will do so.
3. **Surgical Assistants.** Your primary surgeon may elect to be assisted by other doctors, registered nurses or physician assistants. Such surgical assistants are all professionally trained and perform under the supervision of the primary surgeon and within the scope of their licenses and medical staff privileges. In some cases, resident physicians may assist in your operation, under the guidance of your primary surgeon. Resident physicians are doctors who are in the Hospital's accredited teaching program, or an approved external program.
4. **Your Right to Information; Right to Refuse.** Your operation or procedure has some risks including the risk of unsuccessful results, complications, injury, or even death, from both known and unforeseen causes. No promise or guarantee is made about the result or cure. You have the right to be told about:
 - the nature of the operation or procedure
 - the expected benefits, risks and side effects of the operation or procedure, including potential problems that might occur during recuperation
 - the likelihood of achieving your treatment goals
 - reasonable alternatives to the operation or procedure, and their benefits, risks and side effects, including what might happen if you do not receive the operation or procedure
 - any research or financial interests your doctors may have related to your operation
 - when indicated, any limitations on the confidentiality of your medical informationExcept in an emergency, your operation will not be performed until you have received this information and have given your consent to have the operation. You may refuse to have the proposed operation or procedure at any time before the operation happens.
5. **Anesthesia.** The planned anesthesia for your operation or procedure may include: general, regional, sedation monitored anesthesia care or local. The anesthesia will be administered by an anesthesiologist (a doctor) or a nurse anesthetist. The anesthesia provider will discuss the anesthesia plan with you prior to your operation or procedure. The anesthesia plan may change, if required, to respond to events that happen during the operation or procedure. Most anesthesia providers are independent practitioners and are not employees or agents of the hospital.
6. **Staff and Facilities.** Other doctors, such as pathologists and radiologists, may be involved with the performance of some part of your operation or procedure. Most doctors on our medical staff are independent practitioners and are not employees or agents of the Hospital. The Hospital is responsible for providing the facilities, equipment, supplies and staff to help your primary surgeon and the other doctors carry out the surgery or procedure.

7. **Medical Device Representatives.** Your primary surgeon may have requested that representatives from a medical device company be present to assist with the medical devices or equipment used during your operation or procedure. The representatives' names will be documented in your medical record. These representatives are not doctors or nurses or agents or representatives of the Hospital. You have the right to refuse to have them present. Please discuss any questions about their presence with your doctors. By signing this form, you agree that they may be present in the operating room during your operation or procedure.
8. **Other Observers.** Other persons who will not take part in your operation or procedure may be present in the operating room, or may be observing your operation or procedure by audio or video communication, as part of their education or training, or in connection with medical staff oversight. These observers may include resident physicians, medical staff members, students, or trainees enrolled in a health professional training program affiliated with the hospital.
9. **Blood Transfusions.** Your doctor will tell you if you might need a blood transfusion as a result of your operation or procedure. If you do, your doctor will give you a booklet about blood transfusion. The booklet will explain the benefits and risks of different types of blood transfusions, including predonation by you or by someone else. You have the right to have adequate time before your operation or procedure to arrange for predonation. You can give up this right if you do not wish to wait. Blood transfusions have certain risks. For example, blood can carry disease, such as hepatitis or Human Immunodeficiency Virus (HIV). You have the right to refuse any transfusion. You should discuss any questions that you may have about transfusions with your doctors.
10. **Disposal of Tissues.** By signing this consent form, you give permission for the pathologist to decide how to dispose of any body part, organ, or other tissue removed from you during your operation or procedure. If you want to place special conditions on the use or disposal of your tissues, you may do so below:
- _____
- _____
- _____

11. **Acknowledgment and Signature.** By signing this form, you are indicating that:
- You have read and understand the information in this form;
 - Your doctor has discussed with you the operation or procedure and explained the risks and benefits and any foreseeable problems;
 - Your doctor has discussed alternative methods of treatment available, their risks and benefits, and what would happen if you did not have the operation or procedure;
 - You had a chance to ask your doctor any questions about the operation or procedure
 - You authorize and consent to the performance of the operation or procedure and the anesthesia.

Additional Discharge Instructions

Level of daily activity-You may need to change your daily routine to avoid behavior that will make your symptoms worse. Follow your doctor's recommendations regarding your activity level.

Diet- Follow your doctors recommended diet. If no restrictions apply you may improve your condition by eating more healthful foods. Moderate restrictions on salt, for example, sometimes apply.

Instructions about medications-Take your medications as prescribed. Do not stop taking prescribed medicines even if you start to feel better, unless your doctor tells you to. Give a copy of the medication information you received to your primary care physician. Carry a medication list with you and keep the list up-to-date.

An appointment for a follow-up exam-Schedule a follow-up appointment, where you can confirm that your medications are working and detect early warning signs of new problems.

If you have been diagnosed with heart failure-

1. Call your doctor, or seek immediate medical attention if your symptoms worsen:

- Your ankles or feet swell more than usual.
- You start coughing at night or have frequent dry cough.
- Breathing becomes difficult

2. At home, you should weigh yourself every morning at the same time on the same scale. Keep a daily record of your weight. Call your doctor if you gain two or more pounds overnight or five pounds in a week.

If you have been diagnosed with a stroke or TIA- Call 911 immediately for:

- Sudden weakness or numbness of face, arm and leg usually on one side of the body.
- Loss of vision, particularly in only one eye.
- Sudden severe headache with no known cause.
- Sudden trouble walking, dizziness, loss of balance or coordination, slurred speech.

DOB: 8/4/1956 Age: 67 years Sex: F
Admit Date: 3/19/2024
Disch Date: 3/19/2024
Physician: Bragg, William E MD

Depart Summary

Risk factors for stroke:

- ☐ ☐ ☐ ☐ ☐ Age: the older you get, the more likely you are to have a stroke.
- ☐ ☐ ☐ ☐ ☐ Men, African-Americans and Mexican-Americans have a higher risk.
- ☐ ☐ ☐ ☐ ☐ Already having had a stroke makes you more likely to have another.
- ☐ ☐ ☐ ☐ ☐ Family history of stroke (parent, grandparent, brother/sister) increases your risk.
- ☐ ☐ ☐ ☐ ☐ You can control, treat or prevent some conditions to reduce your likelihood of stroke. High blood pressure, cigarette smoking, high cholesterol, lack of regular physical activity, overweight, diabetes are all risk factors that can be changed.

Additional information for smokers-STOP SMOKING. Tobacco product use in any form can be hazardous to your health and to the health of those around you. If you smoke or chew tobacco consider quitting. Smoking cessation is particularly important if you were hospitalized for pneumonia, congestive heart failure, stroke or heart attack. Refer to admission packet for more information.

Patient Education and Medication Handouts, if any, will display below

Surgery for Acromioclavicular Separation

Acromioclavicular separation is an injury to the small joint at the top of the shoulder (acromioclavicular joint, or AC joint). The AC joint connects the outer tip of the collarbone (clavicle) to the top of the shoulder blade (acromion). Two strong cords of tissue (acromioclavicular ligament and coracoclavicular ligament) stretch across the AC joint to keep it in place. An AC joint separation happens when one or both ligaments stretch or tear, causing the joint to separate.

You may need surgery to repair an acromioclavicular separation if your condition is severe or if other treatment methods have not helped you. The surgery may include using a piece of tissue (tendon graft) to strengthen the AC joint.

Tell a health care provider about:

- Any allergies you have.
- All medicines you are taking, including vitamins, herbs, eye drops, creams, and over-the-counter medicines.
- Any problems you or family members have had with anesthetic medicines.
- Any bleeding problems you have.

DOB: 8/4/1956 Age: 67 years Sex: F

Admit Date: 3/19/2024

Disch Date: 3/19/2024

Physician: Bragg, William E MD

Depart Summary

- Any surgeries you have had.
- Any medical conditions you have.
- Whether you are pregnant or may be pregnant.

What are the risks?

Your health care provider will talk with you about risks. These may include:

- Infection.
- Bleeding.
- Allergic reactions to medicines.
- Damage to blood vessels or nerves.
- A blood clot forming in the arm or leg.
- Development of arthritis in the shoulder.

What happens before the procedure?

Medicines

Ask your health care provider about:

- Changing or stopping your regular medicines. These include any diabetes medicines or blood thinners you take.
- Taking medicines such as aspirin and ibuprofen. These medicines can thin your blood. **Do not** take them unless your health care provider tells you to.
- Taking over-the-counter medicines, vitamins, herbs, and supplements.

When to stop eating and drinking

Follow instructions from your health care provider about what you may eat and drink. These may include:

- 8 hours before your procedure
 - Stop eating most foods. **Do not** eat meat, fried foods, or fatty foods.

NAME: **MILLSDIXON, ANGELA D**
MRN: 01274297(M); 0000112966(AMB)

Acct #: 215369653(M)
Pt Loc: MGH SUR

DOB: 8/4/1956 Age: 67 years Sex: F
Admit Date: 3/19/2024
Disch Date: 3/19/2024
Physician: Bragg, William E MD

Depart Summary

- Eat only light foods, such as toast or crackers.
- All liquids are okay except energy drinks and alcohol.
- 6 hours before your procedure
 - Stop eating.
 - Drink only clear liquids, such as water, clear fruit juice, black coffee, plain tea, and sports drinks.
 - **Do not** drink energy drinks or alcohol.
- 2 hours before your procedure
 - Stop drinking all liquids.
 - You may be allowed to take medicines with small sips of water.

If you do not follow your health care provider's instructions, your procedure may be delayed or canceled.

General instructions

- **Do not** use any products that contain nicotine or tobacco. These products include cigarettes, chewing tobacco, and vaping devices, such as e-cigarettes. If you need help quitting, ask your health care provider.
- Ask your health care provider:
 - How your surgery site will be marked.
 - What steps will be taken to help prevent infection. These steps may include:
 - Removing hair at the surgery site.
 - Washing skin with a soap that kills germs.
 - Taking antibiotics.
- If you will be going home right after the procedure, plan to have a responsible adult:
 - Take you home from the hospital or clinic. You will not be allowed to drive.
 - Care for you for the time you are told.

What happens during the procedure?

NAME: **MILLSDIXON, ANGELA D**
 MRN: 01274297(M); 0000112966(AMB)

Acct #: 215369653(M)

DOB: 8/4/1956 Age: 67 years Sex: F

Admit Date: 3/19/2024

Disch Date: 3/19/2024

Physician: Bragg, William E MD

Depart Summary

- An IV will be inserted into one of your veins.
- You may be given:
 - A sedative. This helps you relax.
 - Anesthesia. This will:
 - Numb certain areas of your body.
 - Make you fall asleep for surgery.
- If you are having a tendon graft:
 - An incision will be made in the area that the piece of tendon will be taken from. After the piece of tendon is removed, this incision will be closed with stitches (sutures) and covered with a bandage (dressing).
 - In some cases, the surgeon may use a piece of tendon that was taken from a donor and has been frozen and stored.
- An incision will be made in the shoulder area and into the tissues that surround your AC joint (shoulder capsule).
- Ligaments that can be repaired may be stitched together or attached (anchored) to each side of your AC joint with screws.
- A small portion of bone at the outside end of your clavicle may be removed.
- Holes may be made through the end of your clavicle and through your acromion.
- A suture, the tendon graft, or both will be threaded through the holes and tightened across your AC joint to hold your joint together. Other repairs may be done across the coracoclavicular joint using a graft or sutures.
- The incision inside your shoulder capsule will be closed with sutures.

NAME: **MILLSDIXON, ANGELA D**
MRN: 01274297(M); 0000112966(AMB)

Acct #: 215369653(M)

Pt Loc: MGH SUR

DOB: 8/4/1956 Age: 67 years Sex: F

Admit Date: 3/19/2024

Disch Date: 3/19/2024

Physician: Bragg, William E MD

Depart Summary

- The incision on your skin will be closed with sutures, skin glue, or adhesive strips and covered with a dressing.
- Your arm will be placed in a sling. In some cases, an abductor pillow will be used to hold the arm away from your body.

The procedure may vary among health care providers and hospitals.

What happens after the procedure?

- Your blood pressure, heart rate, breathing rate, and blood oxygen level will be monitored until you leave the hospital or clinic.
- You will be given medicine for pain as needed.
- You will be encouraged to get up and walk as soon as you can. This will improve blood flow and breathing. Ask for help if you feel weak or unsteady.
- You may have to wear compression stockings. These stockings help to prevent blood clots and reduce swelling in your legs.

Distal Biceps Tendon Tear Repair

NAME: **MILLSDIXON, ANGELA D**
MRN: 01274297(M); 0000112966(AMB)

Acct #: 215369653(M)
Pt Loc: MGH SUR

DOB: 8/4/1956 Age: 67 years Sex: F
Admit Date: 3/19/2024
Disch Date: 3/19/2024
Physician: Bragg, William E MD

Depart Summary

Distal biceps tendon tear repair is a surgical procedure to reattach the distal biceps tendon to a bone in the elbow (radius). The distal biceps tendon is a strong cord of tissue that attaches the biceps muscle to the radius. When the distal biceps tendon tears, the biceps muscle separates from the radius. This can affect your ability to turn your hand palm-up and bend your elbow. The goal of this procedure is to reattach the tendon to the radius and to help the biceps muscle function normally.

Tell a health care provider about:

- Any allergies you have.
- All medicines you are taking, including vitamins, herbs, eye drops, creams, and over-the-counter medicines.
- Any problems you or family members have had with anesthesia.
- Any bleeding problems you have.
- Any surgeries you have had.
- Any medical conditions you have.
- Whether you are pregnant or may be pregnant.

What are the risks?

Your health care provider will talk with you about risks. These may include:

- Infection.
- Bleeding.
- Allergic reactions to medicines.
- Damage to other structures, such as nerves in the arm. This could cause an inability to move the hand, forearm, or elbow (paralysis).
- A tear that happens again (recurrence).
- Stiffness or decreased range of motion in the wrist, forearm, or elbow.

DOB: 8/4/1956 Age: 67 years Sex: F

Admit Date: 3/19/2024

Disch Date: 3/19/2024

Physician: Bragg, William E MD

Depart Summary

General instructions

- You may have a physical exam of your arm.
- You may have imaging tests, including X-rays, MRI, or ultrasound. You may also have blood or urine tests.
- If you will be going home right after the procedure, plan to have a responsible adult:
 - Take you home from the hospital or clinic. You will not be allowed to drive.
 - Care for you for the time you are told.

What happens during the procedure?

- An IV will be inserted into one of your veins.
- You may be given:
 - A sedative. This helps you relax.
 - Anesthesia. This will:
 - Numb certain areas of your body.
 - Make you fall asleep for surgery.
- An incision will be made in the front of your elbow. Another incision may be made in the outer side of your elbow, depending on which technique your surgeon uses.
- Your tendon will be attached to your radius with one of the following methods:
 - If only one incision is made in your elbow, screws (bone anchors) will be inserted into your radius through the incision. Your tendon will be attached to your radius using surgical stitches (sutures) that are sewn onto the bone anchors.
 - If two incisions are made in your elbow, surgical instruments will be inserted through the incision in your outer elbow. A small hole (trough) will be made in your radius. Your tendon will be attached to your radius with sutures that are threaded through the trough.
- Your incision or incisions will be closed using sutures, skin glue, or adhesive tape.
- Your incision or incisions may be covered with a bandage (dressing).
- A brace, splint, or cast may be applied to your elbow to keep it in place for a period of time (immobilization).

The procedure may vary among health care providers and hospitals.

What happens after the procedure?

- Your blood pressure, heart rate, breathing rate, and blood oxygen level will be monitored until you leave the hospital or clinic.
- You will have some pain. You will be given medicine to treat the pain.

Admit Date: 3/19/2024
Disch Date: 3/19/2024
Physician: Bragg, William E MD

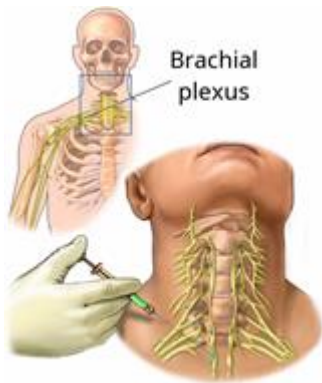

Depart Summary

- You may go home right after the procedure.
- You may be given a sling to support your arm and relieve discomfort.
- **Do not** drive or operate machinery until your health care provider says that it is safe.
- You may be seen by a physical therapist.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

Document Revised: 05/15/2023 Document Reviewed: 05/15/2023
Elsevier Patient Education © 2023 Elsevier Inc.

Interscalene Nerve Block

An interscalene nerve block is an injection of numbing medicine into a group of nerves in the neck called the brachial plexus. These nerves control feeling and movement in the shoulder and upper arm. This procedure may be done to:

- Numb your shoulder and upper arm during surgery. The nerve block may be done along with giving you a medicine to make you fall asleep (general anesthetic). The nerve block can lead to better pain control after surgery and a faster recovery with fewer side effects.
- Help relieve pain in your shoulder or upper arm when you have pain from an injury or a medical condition.

The interscalene nerve block may be done as a single injection or as a continuous block in which a long, thin tube (catheter) is inserted to deliver numbing medicine to the nerves over a longer period.

Tell a health care provider about:

- Any allergies you have.
- All medicines you are taking, including vitamins, herbs, eye drops, creams, and over-the-counter medicines.

NAME: **MILLSDIXON, ANGELA D**
MRN: 01274297(M); 0000112966(AMB)

Acct #: 215369653(M)

Pt Loc: MGH SUR

DOB: 8/4/1956 Age: 67 years Sex: F

Admit Date: 3/19/2024

Disch Date: 3/19/2024

Physician: Bragg, William E MD

Depart Summary

- Any surgeries and anesthetics you have had.
- Any problems you or family members have had with anesthetic medicines.
- Any blood disorders you have.
- Any medical conditions you have, including any lung disease.
- Whether you are pregnant or may be pregnant.
- Whether you use tobacco products, drink alcohol, or use drugs, such as marijuana.

What are the risks?

Generally, this is a safe procedure. However, problems may occur, including:

- Damage to nearby structures or organs, such as damage to nerves, blood vessels, other neck structures, or lungs. Lung damage can cause lung collapse (pneumothorax).
- Bleeding.
- Infection.
- Numbness, tingling, or weakness of the shoulder or arm.
- Numbing of other nerves near the brachial plexus. This may cause hoarseness, eye droop, dry eye, eye redness, shortness of breath, or chest tightness.
- Allergic reactions or other reactions to medicines, such as seizures or heart problems.

What happens before the procedure?

Staying hydrated

Follow instructions from your health care provider about hydration, which may include:

- Up to 2 hours before the procedure – you may continue to drink clear liquids, such as water, clear fruit juice, black coffee, and plain tea.

Eating and drinking restrictions

Follow instructions from your health care provider about eating and drinking, which may include:

- 8 hours before the procedure – stop eating heavy meals or foods, such as meat, fried foods, or fatty foods.
- 6 hours before the procedure – stop eating light meals or foods, such as toast or cereal.
- 6 hours before the procedure – stop drinking milk or drinks that contain milk.
- 2 hours before the procedure – stop drinking clear liquids.

Medicines

NAME: **MILLSDIXON, ANGELA D**
MRN: 01274297(M); 0000112966(AMB)

Acct #: 215369653(M)

Pt Loc: MGH SUR

DOB: 8/4/1956 Age: 67 years Sex: F

Admit Date: 3/19/2024

Disch Date: 3/19/2024

Physician: Bragg, William E MD

Depart Summary

Ask your health care provider about:

- Changing or stopping your regular medicines. This is especially important if you are taking diabetes medicines or blood thinners.
- Taking medicines such as aspirin and ibuprofen. These medicines can thin your blood. **Do not** take these medicines unless your health care provider tells you to take them.
- Taking over-the-counter medicines, vitamins, herbs, and supplements.

General instructions

- **Do not** use any products that contain nicotine or tobacco for 3–6 weeks before the procedure. These products include cigarettes, chewing tobacco, and vaping devices, such as e-cigarettes. If you need help quitting, ask your health care provider.
- Ask your health care provider:
 - How your surgery site will be marked.
 - What steps will be taken to help prevent infection. These may include:
 - Washing skin with a germ-killing soap.
 - Taking antibiotic medicine.
- Ask if you will be going home the day of the procedure or the next day. If you can go home the day of the procedure:
 - Plan to have a responsible adult take you home from the hospital or clinic.
 - Plan to have a responsible adult care for you for the time you are told. This is important.

What happens during the procedure?

- An IV will be inserted into one of your veins, usually in the arm on the side that will not receive the block.
- You will be given one or more of the following:
 - A medicine to help you relax (sedative).
 - A general anesthetic.
 - A medicine to help decrease pain (analgesic).
- You will be asked to rest on your back, usually with your head turned slightly to the side.
- To locate the muscles over your brachial plexus, your health care provider will feel your neck area above your collarbone.
- A medicine will be injected into the skin of your neck to numb the skin where the block will be placed (local anesthetic).
- A needle will be inserted through your skin, toward the brachial plexus.
- Ultrasound imaging may be used to help locate your brachial plexus.

NAME: **MILLSDIXON, ANGELA D**
MRN: 01274297(M); 0000112966(AMB)

Acct #: 215369653(M)

Pt Loc: MGH SUR

DOB: 8/4/1956 Age: 67 years Sex: F

Admit Date: 3/19/2024

Disch Date: 3/19/2024

Physician: Bragg, William E MD

Depart Summary

- A needle with an electrical current may be used to stimulate and find the right nerves. This may cause your shoulder or arm to twitch.
- The block will be put in as follows:
 - If you are having a single-injection nerve block, the numbing medicine for the brachial plexus will be injected. The needle injecting the numbing medicine will then be removed.
 - If you are having a continuous block, a catheter may be placed to deliver medicine to the nerves nonstop, often for 1–2 days.
- A clear bandage (dressing) may be placed over the needle injection site. For a continuous block, more dressings may be added to secure the tubing.

The procedure may vary among health care providers and hospitals.

What happens after the procedure?

After the block is placed, you will be monitored, and the effect of the block will be checked. Your shoulder and upper arm should be numb, and your fingers may also feel numb and tingle.

If you have a surgery right after you have the block, these things may happen after the surgery:

- Your blood pressure, heart rate, breathing rate, and blood oxygen level will be monitored until you leave the hospital or clinic.
- Your arm may remain numb for several hours afterward. If you have a continuous block catheter in place, your arm may remain numb for longer.
- You may have to wear a sling to:
 - Keep your arm safe from injury while it is numb.
 - Support your arm after surgery.
- As the nerve block medicine wears off:
 - You may begin to feel pain at the surgical site. If this happens, follow instructions from your health care provider about taking other pain medicine.
 - You may have tingling in your shoulder, arm, and fingers.
 - Your muscle strength and feeling will return within hours.
- **Do not** drive or operate machinery until your health care provider says that it is safe.

Summary

- An interscalene nerve block is an injection of numbing medicine into a group of nerves in your neck that control your shoulder and upper arm.

Although surgery is painful, it is expected that your pain will gradually decrease following surgery. If your pain becomes difficult to control, or you notice increasing redness, drainage, or swelling, please contact our office immediately. We can be reached as per the below:

- During the day, please call the Orthopedic Surgery Clinic at 916.733.5700 with any questions or concerns.
- After hours, you may call the same number and a member of the Answering Service will help resolve your issue and route the call appropriately to the On Call Provider.
- If you are in need of pain medication, please call us when you are running low (before you run out), because refills may take time to process. It may take up to 72 hours for a refill. Please review the Narcotic Medication Policy handout for guidance (given with pre-operative paperwork).

Depart Summary

In case of an emergency, please go to the Emergency Room for evaluation. Chest pain, shortness of breath, uncontrollable bleeding, loss of consciousness, worsening numbness and tingling, inability to move the affected area, or any other concerning symptoms warrant a visit to the Emergency Room immediately.

Bill Bragg, M.D. M.B.A
Orthopedic Surgery
Phone: 916.733.5700
Fax: 916.733.5714

What to Expect After Rotator Cuff Repair:

You should wear the sling 95% of the day for the first 5 weeks after surgery. This is necessary to protect the repair, which is critical for proper healing. You should also be sleeping in the sling for the first 5 weeks after surgery. If you use your shoulder too soon, you can re-tear the repair!

During the first 5 weeks, you can come out of the sling to get dressed, and to shower. But no active motion of the shoulder, such as reaching outwards or upwards, is allowed. For example, no motion such as required to wash your hair, do laundry, washing dishes, or cleaning a window with the arm. You may move your wrist and elbow but not the shoulder. You should not drive a car while wearing the sling. You can use a computer while in the sling.

You can shower with the Aquacel dressing on your shoulder. To shower, you should remove the sling, let the arm dangle down, and bend forward to clean under the arm with the opposite hand. The dressing should be waterproof. If the dressing does get wet or soiled underneath, it may be removed and replaced with adhesive bandages / Band-Aids.

The original dressing should be removed after the third day following surgery. Leaving it on too long may cause skin irritation. There may be glue on your skin underneath the dressing. Do not remove the glue or any sutures. You can replace the dressing with dry, clean gauze dressings after day 3. After those first three days, it is okay to shower directly over the incision(s) but do not fully immerse or soak (do not take a bath).

Depart Summary

Until we see you in clinic and clear you for activity, no exercise to the surgical shoulder (no pendulums, stretches, band exercises etc.).

In addition to any narcotic medications you have been prescribed, you may restart any anti-inflammatory medication (e.g. ibuprofen, naproxen, etc.) unless otherwise instructed.

Time to recovery:

Time off of work usually is between 2 weeks to greater than 3 months, depending on the nature of the job. No heavy lifting with the arm (>15 pounds) for the first 5 months after surgery.

Pain should be markedly reduced by 3-6 months after surgery, and your ability to reach vertically overhead is usually achieved by approximately 6 months after surgery. Patients can continue to improve with regard to motion and pain, up to one year after surgery.

I, ANGELA MILLS DIXON , understand that Mercy General Hospital is not responsible for any personal belongings/effects or valuables that have not been identified on the valuable and belonging list. Any personal effects brought into the facility and not recorded on the valuables and belongings form are the responsibility of the patient/family/significant other.

Physician: Bragg, William E MD

Patient Education/Depart Summary

Although surgery is painful, it is expected that your pain will gradually decrease following surgery. If your pain becomes difficult to control, or you notice increasing redness, drainage, or swelling, please contact our office immediately. We can be reached as per the below:

- During the day, please call the Orthopedic Surgery Clinic at 916.733.5700 with any questions or concerns.
- After hours, you may call the same number and a member of the Answering Service will help resolve your issue and route the call appropriately to the On Call Provider.
- If you are in need of pain medication, please call us when you are running low (before you run out), because refills may take time to process. It may take up to 72 hours for a refill. Please review the Narcotic Medication Policy handout for guidance (given with pre-operative paperwork).

In case of an emergency, please go to the Emergency Room for evaluation. Chest pain, shortness of breath, uncontrollable bleeding, loss of consciousness, worsening numbness and tingling, inability to move the affected area, or any other concerning symptoms warrant a visit to the Emergency Room immediately.

What to Expect After Rotator Cuff Repair:

NAME: **MILLSDIXON, ANGELA D**
MRN: 01274297(M); 0000112966(AMB)

Acct #: 215369653(M)

Pt Loc: MGH SUR

DOB: 8/4/1956 Age: 67 years Sex: F

Admit Date: 3/19/2024

Disch Date: 3/19/2024

Physician: Bragg, William E MD

Patient Education/Depart Summary

You should wear the sling 95% of the day for the first 5 weeks after surgery. This is necessary to protect the repair, which is critical for proper healing. You should also be sleeping in the sling for the first 5 weeks after surgery. If you use your shoulder too soon, you can re-tear the repair!

During the first 5 weeks, you can come out of the sling to get dressed, and to shower. But no active motion of the shoulder, such as reaching outwards or upwards, is allowed. For example, no motion such as required to wash your hair, do laundry, washing dishes, or cleaning a window with the arm. You may move your wrist and elbow but not the shoulder. You should not drive a car while wearing the sling. You can use a computer while in the sling.

You can shower with the Aquacel dressing on your shoulder. To shower, you should remove the sling, let the arm dangle down, and bend forward to clean under the arm with the opposite hand. The dressing should be waterproof. If the dressing does get wet or soiled underneath, it may be removed and replaced with adhesive bandages / Band-Aids.

The original dressing should be removed after the third day following surgery. Leaving it on too long may cause skin irritation. There may be glue on your skin underneath the dressing. Do not remove the glue or any sutures. You can replace the dressing with dry, clean gauze dressings after day 3. After those first three days, it is okay to shower directly over the incision(s) but do not fully immerse or soak (do not take a bath).

Until we see you in clinic and clear you for activity, no exercise to the surgical shoulder (no pendulums, stretches, band exercises etc.).

In addition to any narcotic medications you have been prescribed, you may restart any anti-inflammatory medication (e.g. ibuprofen, naproxen, etc.) unless otherwise instructed.

Time to recovery:

Time off of work usually is between 2 weeks to greater than 3 months, depending on the nature of the job. No heavy lifting with the arm (>15 pounds) for the first 5 months after surgery.

Pain should be markedly reduced by 3-6 months after surgery, and your ability to reach vertically overhead is usually achieved by approximately 6 months after surgery. Patients can continue to improve with regard to motion and pain, up to one year after surgery.

Neurology

Disch Date: 3/19/2024
Physician: Bragg, William E MD

Patient Education/Depart Summary

Interscalene Nerve Block

An interscalene nerve block is an injection of numbing medicine into a group of nerves in the neck called the brachial plexus. These nerves control feeling and movement in the shoulder and upper arm. This procedure may be done to:

- Numb your shoulder and upper arm during surgery. The nerve block may be done along with giving you a medicine to make you fall asleep (general anesthetic). The nerve block can lead to better pain control after surgery and a faster recovery with fewer side effects.
- Help relieve pain in your shoulder or upper arm when you have pain from an injury or a medical condition.

The interscalene nerve block may be done as a single injection or as a continuous block in which a long, thin tube (catheter) is inserted to deliver numbing medicine to the nerves over a longer period.

Tell a health care provider about:

- Any allergies you have.
- All medicines you are taking, including vitamins, herbs, eye drops, creams, and over-the-counter medicines.
- Any surgeries and anesthetics you have had.
- Any problems you or family members have had with anesthetic medicines.
- Any blood disorders you have.
- Any medical conditions you have, including any lung disease.
- Whether you are pregnant or may be pregnant.
- Whether you use tobacco products, drink alcohol, or use drugs, such as marijuana.

What are the risks?

NAME: **MILLSDIXON, ANGELA D**
MRN: 01274297(M); 0000112966(AMB)

Acct #: 215369653(M)

Pt Loc: MGH SUR

DOB: 8/4/1956 Age: 67 years Sex: F

Admit Date: 3/19/2024

Disch Date: 3/19/2024

Physician: Bragg, William E MD

Patient Education/Depart Summary

Generally, this is a safe procedure. However, problems may occur, including:

- Damage to nearby structures or organs, such as damage to nerves, blood vessels, other neck structures, or lungs. Lung damage can cause lung collapse (pneumothorax).
- Bleeding.
- Infection.
- Numbness, tingling, or weakness of the shoulder or arm.
- Numbing of other nerves near the brachial plexus. This may cause hoarseness, eye droop, dry eye, eye redness, shortness of breath, or chest tightness.
- Allergic reactions or other reactions to medicines, such as seizures or heart problems.

What happens before the procedure?

Staying hydrated

Follow instructions from your health care provider about hydration, which may include:

- Up to 2 hours before the procedure – you may continue to drink clear liquids, such as water, clear fruit juice, black coffee, and plain tea.

Eating and drinking restrictions

Follow instructions from your health care provider about eating and drinking, which may include:

- 8 hours before the procedure – stop eating heavy meals or foods, such as meat, fried foods, or fatty foods.
- 6 hours before the procedure – stop eating light meals or foods, such as toast or cereal.
- 6 hours before the procedure – stop drinking milk or drinks that contain milk.
- 2 hours before the procedure – stop drinking clear liquids.

Medicines

Ask your health care provider about:

- Changing or stopping your regular medicines. This is especially important if you are taking diabetes medicines or blood thinners.
- Taking medicines such as aspirin and ibuprofen. These medicines can thin your blood. **Do not** take these medicines unless your health care provider tells you to take them.
- Taking over-the-counter medicines, vitamins, herbs, and supplements.

General instructions

NAME: **MILLSDIXON, ANGELA D**
MRN: 01274297(M); 0000112966(AMB)

Acct #: 215369653(M)

Pt Loc: MGH SUR

DOB: 8/4/1956 Age: 67 years Sex: F

Admit Date: 3/19/2024

Disch Date: 3/19/2024

Physician: Bragg, William E MD

Patient Education/Depart Summary

- **Do not** use any products that contain nicotine or tobacco for 3–6 weeks before the procedure. These products include cigarettes, chewing tobacco, and vaping devices, such as e-cigarettes. If you need help quitting, ask your health care provider.
- Ask your health care provider:
 - How your surgery site will be marked.
 - What steps will be taken to help prevent infection. These may include:
 - Washing skin with a germ-killing soap.
 - Taking antibiotic medicine.
- Ask if you will be going home the day of the procedure or the next day. If you can go home the day of the procedure:
 - Plan to have a responsible adult take you home from the hospital or clinic.
 - Plan to have a responsible adult care for you for the time you are told. This is important.

What happens during the procedure?

- An IV will be inserted into one of your veins, usually in the arm on the side that will not receive the block.
- You will be given one or more of the following:
 - A medicine to help you relax (sedative).
 - A general anesthetic.
 - A medicine to help decrease pain (analgesic).
- You will be asked to rest on your back, usually with your head turned slightly to the side.
- To locate the muscles over your brachial plexus, your health care provider will feel your neck area above your collarbone.
- A medicine will be injected into the skin of your neck to numb the skin where the block will be placed (local anesthetic).
- A needle will be inserted through your skin, toward the brachial plexus.
- Ultrasound imaging may be used to help locate your brachial plexus.
- A needle with an electrical current may be used to stimulate and find the right nerves. This may cause your shoulder or arm to twitch.
- The block will be put in as follows:
 - If you are having a single-injection nerve block, the numbing medicine for the brachial plexus will be injected. The needle injecting the numbing medicine will then be removed.
 - If you are having a continuous block, a catheter may be placed to deliver medicine to the nerves nonstop, often for 1–2 days.
- A clear bandage (dressing) may be placed over the needle injection site. For a continuous block, more dressings may be added to secure the tubing.

NAME: **MILLSDIXON, ANGELA D**
MRN: 01274297(M); 0000112966(AMB)

Acct #: 215369653(M)

Pt Loc: MGH SUR

DOB: 8/4/1956 Age: 67 years Sex: F

Admit Date: 3/19/2024

Disch Date: 3/19/2024

Physician: Bragg, William E MD

Patient Education/Depart Summary

The procedure may vary among health care providers and hospitals.

What happens after the procedure?

After the block is placed, you will be monitored, and the effect of the block will be checked. Your shoulder and upper arm should be numb, and your fingers may also feel numb and tingle.

If you have a surgery right after you have the block, these things may happen after the surgery:

- Your blood pressure, heart rate, breathing rate, and blood oxygen level will be monitored until you leave the hospital or clinic.
- Your arm may remain numb for several hours afterward. If you have a continuous block catheter in place, your arm may remain numb for longer.
- You may have to wear a sling to:
 - Keep your arm safe from injury while it is numb.
 - Support your arm after surgery.
- As the nerve block medicine wears off:
 - You may begin to feel pain at the surgical site. If this happens, follow instructions from your health care provider about taking other pain medicine.
 - You may have tingling in your shoulder, arm, and fingers.
 - Your muscle strength and feeling will return within hours.
- **Do not** drive or operate machinery until your health care provider says that it is safe.

Summary

- An interscalene nerve block is an injection of numbing medicine into a group of nerves in your neck that control your shoulder and upper arm.
- Compared with having a medicine to make you fall asleep (general anesthetic) alone, the nerve block can lead to better control of pain after surgery and a faster recovery with fewer side effects.
- Your arm may remain numb for several hours or longer after the procedure. You may have to wear a sling to keep your arm safe from injury while it is numb and to support your arm after surgery.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

Additional Discharge Instructions

Level of daily activity-You may need to change your daily routine to avoid behavior that will make your symptoms worse. Follow your doctor's recommendations regarding your activity level.

Diet- Follow your doctors recommended diet. If no restrictions apply you may improve your condition by eating more healthful foods. Moderate restrictions on salt, for example, sometimes apply.

Instructions about medications-Take your medications as prescribed. Do not stop taking prescribed medicines even if you start to feel better, unless your doctor tells you to. Give a copy of the medication information you received to your primary care physician. Carry a medication list with you and keep the list up-to-date.

An appointment for a follow-up exam-Schedule a follow-up appointment, where you can confirm that your medications are working and detect early warning signs of new problems.

NAME: **MILLSDIXON, ANGELA D**
MRN: 01274297(M); 0000112966(AMB)

Acct #: 215369653(M)
Pt Loc: MGH SUR

DOB: 8/4/1956 Age: 67 years Sex: F
Admit Date: 3/19/2024
Disch Date: 3/19/2024
Physician: Bragg, William E MD

Patient Education/Depart Summary

If you have been diagnosed with heart failure-

1. Call your doctor, or seek immediate medical attention if your symptoms worsen:
 - Your ankles or feet swell more than usual.
 - You start coughing at night or have frequent dry cough.
 - Breathing becomes difficult
2. At home, you should weigh yourself every morning at the same time on the same scale. Keep a daily record of your weight. Call your doctor if you gain two or more pounds overnight or five pounds in a week.

If you have been diagnosed with a stroke or TIA- Call 911 immediately for:

- Sudden weakness or numbness of face, arm and leg usually on one side of the body.
- Loss of vision, particularly in only one eye.
- Sudden severe headache with no known cause.
- Sudden trouble walking, dizziness, loss of balance or coordination, slurred speech.

Risk factors for stroke:

- ☐ ☐ ☐ ☐ ☐ Age: the older you get, the more likely you are to have a stroke.
- ☐ ☐ ☐ ☐ ☐ Men, African-Americans and Mexican-Americans have a higher risk.
- ☐ ☐ ☐ ☐ ☐ Already having had a stroke makes you more likely to have another.
- ☐ ☐ ☐ ☐ ☐ Family history of stroke (parent, grandparent, brother/sister) increases your risk.
- ☐ ☐ ☐ ☐ ☐ You can control, treat or prevent some conditions to reduce your likelihood of stroke. High blood pressure, cigarette smoking, high cholesterol, lack of regular physical activity, overweight, diabetes are all risk factors that can be changed.

Additional information for smokers-STOP SMOKING. Tobacco product use in any form can be hazardous to your health and to the health of those around you. If you smoke or chew tobacco consider quitting. Smoking cessation is particularly important if you were hospitalized for pneumonia, congestive heart failure, stroke or heart attack. Refer to admission packet for more information.

Patient Education/Depart Summary

Surgery for Acromioclavicular Separation

Acromioclavicular separation is an injury to the small joint at the top of the shoulder (acromioclavicular joint, or AC joint). The AC joint connects the outer tip of the collarbone (clavicle) to the top of the shoulder blade (acromion). Two strong cords of tissue (acromioclavicular ligament and coracoclavicular ligament) stretch across the AC joint to keep it in place. An AC joint separation happens when one or both ligaments stretch or tear, causing the joint to separate.

You may need surgery to repair an acromioclavicular separation if your condition is severe or if other treatment methods have not helped you. The surgery may include using a piece of tissue (tendon graft) to strengthen the AC joint.

Tell a health care provider about:

- Any allergies you have.
- All medicines you are taking, including vitamins, herbs, eye drops, creams, and over-the-counter medicines.
- Any problems you or family members have had with anesthetic medicines.
- Any bleeding problems you have.
- Any surgeries you have had.
- Any medical conditions you have.
- Whether you are pregnant or may be pregnant.

What are the risks?

Your health care provider will talk with you about risks. These may include:

- Infection.
- Bleeding.
- Allergic reactions to medicines.
- Damage to blood vessels or nerves.
- A blood clot forming in the arm or leg.
- Development of arthritis in the shoulder.

What happens before the procedure?

Medicines

Ask your health care provider about:

NAME: **MILLSDIXON, ANGELA D**

Patient Education/Depart Summary

- Changing or stopping your regular medicines. These include any diabetes medicines or blood thinners you take.
- Taking medicines such as aspirin and ibuprofen. These medicines can thin your blood. **Do not** take them unless your health care provider tells you to.
- Taking over-the-counter medicines, vitamins, herbs, and supplements.

When to stop eating and drinking

Follow instructions from your health care provider about what you may eat and drink. These may include:

- 8 hours before your procedure
 - Stop eating most foods. **Do not** eat meat, fried foods, or fatty foods.
 - Eat only light foods, such as toast or crackers.
 - All liquids are okay except energy drinks and alcohol.
- 6 hours before your procedure
 - Stop eating.
 - Drink only clear liquids, such as water, clear fruit juice, black coffee, plain tea, and sports drinks.
 - **Do not** drink energy drinks or alcohol.
- 2 hours before your procedure
 - Stop drinking all liquids.
 - You may be allowed to take medicines with small sips of water.

If you do not follow your health care provider's instructions, your procedure may be delayed or canceled.

General instructions

- **Do not** use any products that contain nicotine or tobacco. These products include cigarettes, chewing tobacco, and vaping devices, such as e-cigarettes. If you need help quitting, ask your health care provider.
- Ask your health care provider:
 - How your surgery site will be marked.
 - What steps will be taken to help prevent infection. These steps may include:
 - Removing hair at the surgery site.

NAME: **MILLSDIXON, ANGELA D**
 MRN: 01274297(M); 0000112966(AMB)

Acct #: 215369653(M)

Pt Loc: MGH SUR

DOB: 8/4/1956 Age: 67 years Sex: F

Admit Date: 3/19/2024

Disch Date: 3/19/2024

Physician: Bragg, William E MD

Patient Education/Depart Summary

- Washing skin with a soap that kills germs.
- Taking antibiotics.
- If you will be going home right after the procedure, plan to have a responsible adult:
 - Take you home from the hospital or clinic. You will not be allowed to drive.
 - Care for you for the time you are told.

What happens during the procedure?

- An IV will be inserted into one of your veins.
- You may be given:
 - A sedative. This helps you relax.
 - Anesthesia. This will:
 - Numb certain areas of your body.
 - Make you fall asleep for surgery.
- If you are having a tendon graft:
 - An incision will be made in the area that the piece of tendon will be taken from. After the piece of tendon is removed, this incision will be closed with stitches (sutures) and covered with a bandage (dressing).
 - In some cases, the surgeon may use a piece of tendon that was taken from a donor and has been frozen and stored.
- An incision will be made in the shoulder area and into the tissues that surround your AC joint (shoulder capsule).

NAME: **MILLSDIXON, ANGELA D**
MRN: 01274297(M); 0000112966(AMB)

Acct #: 215369653(M)

Pt Loc: MGH SUR

DOB: 8/4/1956 Age: 67 years Sex: F

Admit Date: 3/19/2024

Disch Date: 3/19/2024

Physician: Bragg, William E MD

Patient Education/Depart Summary

- Ligaments that can be repaired may be stitched together or attached (anchored) to each side of your AC joint with screws.
- A small portion of bone at the outside end of your clavicle may be removed.
- Holes may be made through the end of your clavicle and through your acromion.
- A suture, the tendon graft, or both will be threaded through the holes and tightened across your AC joint to hold your joint together. Other repairs may be done across the coracoclavicular joint using a graft or sutures.
- The incision inside your shoulder capsule will be closed with sutures.
- The incision on your skin will be closed with sutures, skin glue, or adhesive strips and covered with a dressing.
- Your arm will be placed in a sling. In some cases, an abductor pillow will be used to hold the arm away from your body.

The procedure may vary among health care providers and hospitals.

What happens after the procedure?

- Your blood pressure, heart rate, breathing rate, and blood oxygen level will be monitored until you leave the hospital or clinic.
- You will be given medicine for pain as needed.
- You will be encouraged to get up and walk as soon as you can. This will improve blood flow and breathing. Ask for help if you feel weak or unsteady.
- You may have to wear compression stockings. These stockings help to prevent blood clots and reduce swelling in your legs.

Where to find more information

- American Academy of Orthopaedic Surgeons: orthoinfo.aaos.org

Summary

- Acromioclavicular separation is an injury to the small joint at the top of the shoulder (acromioclavicular joint, or AC joint).
- You may need surgery to repair this injury if your condition is severe or if other treatment methods have not helped you.
- In some cases, the surgery may include having a piece of tissue removed from your body (tendon graft) and using it to strengthen the AC joint.
- Follow instructions from your health care provider about taking medicines and about eating and drinking before the procedure.

Distal Biceps Tendon Tear Repair

Distal biceps tendon tear repair is a surgical procedure to reattach the distal biceps tendon to a bone in the elbow (radius). The distal biceps tendon is a strong cord of tissue that attaches the biceps muscle to the radius. When the distal biceps tendon tears, the biceps muscle separates from the radius. This can affect your ability to turn your hand palm-up and bend your elbow. The goal of this procedure is to reattach the tendon to the radius and to help the biceps muscle function normally.

Tell a health care provider about:

- Any allergies you have.
- All medicines you are taking, including vitamins, herbs, eye drops, creams, and over-the-counter medicines.
- Any problems you or family members have had with anesthesia.
- Any bleeding problems you have.
- Any surgeries you have had.
- Any medical conditions you have.
- Whether you are pregnant or may be pregnant.

What are the risks?

Your health care provider will talk with you about risks. These may include:

NAME: **MILLSDIXON, ANGELA D**
MRN: 01274297(M); 0000112966(AMB)

Acct #: 215369653(M)
Pt Loc: MGH SUR

DOB: 8/4/1956 Age: 67 years Sex: F
Admit Date: 3/19/2024
Disch Date: 3/19/2024
Physician: Bragg, William E MD

Patient Education/Depart Summary

- Infection.
- Bleeding.
- Allergic reactions to medicines.
- Damage to other structures, such as nerves in the arm. This could cause an inability to move the hand, forearm, or elbow (paralysis).
- A tear that happens again (recurrence).
- Stiffness or decreased range of motion in the wrist, forearm, or elbow.

What happens before the procedure?

When to stop eating and drinking

Follow instructions from your health care provider about what you may eat and drink. These may include:

- 8 hours before your procedure
 - Stop eating most foods. **Do not** eat meat, fried foods, or fatty foods.
 - Eat only light foods, such as toast or crackers.
 - All liquids are okay except energy drinks and alcohol.
- 6 hours before your procedure
 - Stop eating.
 - Drink only clear liquids, such as water, clear fruit juice, black coffee, plain tea, and sports drinks.
 - **Do not** drink energy drinks or alcohol.
- 2 hours before your procedure
 - Stop drinking all liquids.
 - You may be allowed to take medicines with small sips of water.

If you do not follow your health care provider's instructions, your procedure may be delayed or canceled.

Medicines

Ask your health care provider about:

- Changing or stopping your regular medicines. These include any diabetes medicines or blood thinners you take.
- Taking medicines such as aspirin and ibuprofen. These medicines can thin your blood. **Do not** take them unless your health care provider tells you to.
- Taking over-the-counter medicines, vitamins, herbs, and supplements.

NAME: **MILLSDIXON, ANGELA D**
MRN: 01274297(M); 0000112966(AMB)

Acct #: 215369653(M)
Pt Loc: MGH SUR

DOB: 8/4/1956 Age: 67 years Sex: F
Admit Date: 3/19/2024
Disch Date: 3/19/2024
Physician: Bragg, William E MD

Patient Education/Depart Summary

Surgery safety

Ask your health care provider:

- How your surgery site will be marked.
- What steps will be taken to help prevent infection. These steps may include:
 - Removing hair at the surgery site.
 - Washing skin with a soap that kills germs.
 - Taking antibiotics.

General instructions

- You may have a physical exam of your arm.
- You may have imaging tests, including X-rays, MRI, or ultrasound. You may also have blood or urine tests.
- If you will be going home right after the procedure, plan to have a responsible adult:
 - Take you home from the hospital or clinic. You will not be allowed to drive.
 - Care for you for the time you are told.

What happens during the procedure?

- An IV will be inserted into one of your veins.
- You may be given:
 - A sedative. This helps you relax.
 - Anesthesia. This will:
 - Numb certain areas of your body.
 - Make you fall asleep for surgery.
- An incision will be made in the front of your elbow. Another incision may be made in the outer side of your elbow, depending on which technique your surgeon uses.
- Your tendon will be attached to your radius with one of the following methods:
 - If only one incision is made in your elbow, screws (bone anchors) will be inserted into your radius through the incision. Your tendon will be attached to your radius using surgical stitches (sutures) that are sewn onto the bone anchors.
 - If two incisions are made in your elbow, surgical instruments will be inserted through the incision in your outer elbow. A small hole (trough) will be made in your radius. Your tendon will be attached to your radius with sutures that are threaded through the trough.
- Your incision or incisions will be closed using sutures, skin glue, or adhesive tape.
- Your incision or incisions may be covered with a bandage (dressing).

NAME: **MILLSDIXON, ANGELA D**
MRN: 01274297(M); 0000112966(AMB)

Admit Date: 3/19/2024
Disch Date: 3/19/2024
Physician: Bragg, William E MD

Patient Education/Depart Summary

- A brace, splint, or cast may be applied to your elbow to keep it in place for a period of time (immobilization).

The procedure may vary among health care providers and hospitals.

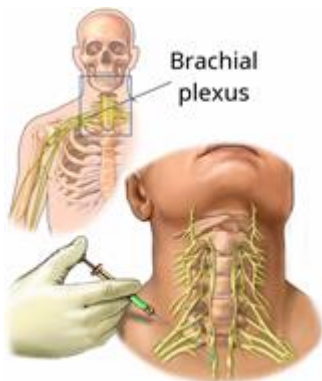

What happens after the procedure?

- Your blood pressure, heart rate, breathing rate, and blood oxygen level will be monitored until you leave the hospital or clinic.
- You will have some pain. You will be given medicine to treat the pain.
- You may go home right after the procedure.
- You may be given a sling to support your arm and relieve discomfort.
- **Do not** drive or operate machinery until your health care provider says that it is safe.
- You may be seen by a physical therapist.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

Document Revised: 05/15/2023 Document Reviewed: 05/15/2023
Elsevier Patient Education © 2023 Elsevier Inc.

Interscalene Nerve Block

An interscalene nerve block is an injection of numbing medicine into a group of nerves in the neck called the brachial plexus. These nerves control feeling and movement in the shoulder and upper arm. This procedure may be done to:

NAME: **MILLSDIXON, ANGELA D**
MRN: 01274297(M); 0000112966(AMB)

Acct #: 215369653(M)

Pt Loc: MGH SUR

DOB: 8/4/1956 Age: 67 years Sex: F

Admit Date: 3/19/2024

Disch Date: 3/19/2024

Physician: Bragg, William E MD

Patient Education/Depart Summary

- Numb your shoulder and upper arm during surgery. The nerve block may be done along with giving you a medicine to make you fall asleep (general anesthetic). The nerve block can lead to better pain control after surgery and a faster recovery with fewer side effects.
- Help relieve pain in your shoulder or upper arm when you have pain from an injury or a medical condition.

The interscalene nerve block may be done as a single injection or as a continuous block in which a long, thin tube (catheter) is inserted to deliver numbing medicine to the nerves over a longer period.

Tell a health care provider about:

- Any allergies you have.
- All medicines you are taking, including vitamins, herbs, eye drops, creams, and over-the-counter medicines.
- Any surgeries and anesthetics you have had.
- Any problems you or family members have had with anesthetic medicines.
- Any blood disorders you have.
- Any medical conditions you have, including any lung disease.
- Whether you are pregnant or may be pregnant.
- Whether you use tobacco products, drink alcohol, or use drugs, such as marijuana.

What are the risks?

Generally, this is a safe procedure. However, problems may occur, including:

- Damage to nearby structures or organs, such as damage to nerves, blood vessels, other neck structures, or lungs. Lung damage can cause lung collapse (pneumothorax).
- Bleeding.
- Infection.
- Numbness, tingling, or weakness of the shoulder or arm.
- Numbing of other nerves near the brachial plexus. This may cause hoarseness, eye droop, dry eye, eye redness, shortness of breath, or chest tightness.
- Allergic reactions or other reactions to medicines, such as seizures or heart problems.

What happens before the procedure?

Staying hydrated

Follow instructions from your health care provider about hydration, which may include:

NAME: **MILLSDIXON, ANGELA D**
MRN: 01274297(M); 0000112966(AMB)

Acct #: 215369653(M)

Pt Loc: MGH SUR

DOB: 8/4/1956 Age: 67 years Sex: F

Admit Date: 3/19/2024

Disch Date: 3/19/2024

Physician: Bragg, William E MD

Patient Education/Depart Summary

- Up to 2 hours before the procedure – you may continue to drink clear liquids, such as water, clear fruit juice, black coffee, and plain tea.

Eating and drinking restrictions

Follow instructions from your health care provider about eating and drinking, which may include:

- 8 hours before the procedure – stop eating heavy meals or foods, such as meat, fried foods, or fatty foods.
- 6 hours before the procedure – stop eating light meals or foods, such as toast or cereal.
- 6 hours before the procedure – stop drinking milk or drinks that contain milk.
- 2 hours before the procedure – stop drinking clear liquids.

Medicines

Ask your health care provider about:

- Changing or stopping your regular medicines. This is especially important if you are taking diabetes medicines or blood thinners.
- Taking medicines such as aspirin and ibuprofen. These medicines can thin your blood. **Do not** take these medicines unless your health care provider tells you to take them.
- Taking over-the-counter medicines, vitamins, herbs, and supplements.

General instructions

- **Do not** use any products that contain nicotine or tobacco for 3–6 weeks before the procedure. These products include cigarettes, chewing tobacco, and vaping devices, such as e-cigarettes. If you need help quitting, ask your health care provider.
- Ask your health care provider:
 - How your surgery site will be marked.
 - What steps will be taken to help prevent infection. These may include:
 - Washing skin with a germ-killing soap.
 - Taking antibiotic medicine.
- Ask if you will be going home the day of the procedure or the next day. If you can go home the day of the procedure:
 - Plan to have a responsible adult take you home from the hospital or clinic.
 - Plan to have a responsible adult care for you for the time you are told. This is important.

What happens during the procedure?

NAME: **MILLSDIXON, ANGELA D**
MRN: 01274297(M); 0000112966(AMB)

Acct #: 215369653(M)

Pt Loc: MGH SUR

DOB: 8/4/1956 Age: 67 years Sex: F

Admit Date: 3/19/2024

Disch Date: 3/19/2024

Physician: Bragg, William E MD

Patient Education/Depart Summary

- An IV will be inserted into one of your veins, usually in the arm on the side that will not receive the block.
- You will be given one or more of the following:
 - A medicine to help you relax (sedative).
 - A general anesthetic.
 - A medicine to help decrease pain (analgesic).
- You will be asked to rest on your back, usually with your head turned slightly to the side.
- To locate the muscles over your brachial plexus, your health care provider will feel your neck area above your collarbone.
- A medicine will be injected into the skin of your neck to numb the skin where the block will be placed (local anesthetic).
- A needle will be inserted through your skin, toward the brachial plexus.
- Ultrasound imaging may be used to help locate your brachial plexus.
- A needle with an electrical current may be used to stimulate and find the right nerves. This may cause your shoulder or arm to twitch.
- The block will be put in as follows:
 - If you are having a single-injection nerve block, the numbing medicine for the brachial plexus will be injected. The needle injecting the numbing medicine will then be removed.
 - If you are having a continuous block, a catheter may be placed to deliver medicine to the nerves nonstop, often for 1–2 days.
- A clear bandage (dressing) may be placed over the needle injection site. For a continuous block, more dressings may be added to secure the tubing.

The procedure may vary among health care providers and hospitals.

What happens after the procedure?

After the block is placed, you will be monitored, and the effect of the block will be checked. Your shoulder and upper arm should be numb, and your fingers may also feel numb and tingle.

If you have a surgery right after you have the block, these things may happen after the surgery:

- Your blood pressure, heart rate, breathing rate, and blood oxygen level will be monitored until you leave the hospital or clinic.
- Your arm may remain numb for several hours afterward. If you have a continuous block catheter in place, your arm may remain numb for longer.
- You may have to wear a sling to:
 - Keep your arm safe from injury while it is numb.

NAME: **MILLSDIXON, ANGELA D**
MRN: 01274297(M); 0000112966(AMB)

Acct #: 215369653(M)
Pt Loc: MGH SUR

DOB: 8/4/1956 Age: 67 years Sex: F
Admit Date: 3/19/2024
Disch Date: 3/19/2024
Physician: Bragg, William E MD

Patient Education/Depart Summary

- Support your arm after surgery.
- As the nerve block medicine wears off:
 - You may begin to feel pain at the surgical site. If this happens, follow instructions from your health care provider about taking other pain medicine.
 - You may have tingling in your shoulder, arm, and fingers.
 - Your muscle strength and feeling will return within hours.
- **Do not** drive or operate machinery until your health care provider says that it is safe.

Summary

- An interscalene nerve block is an injection of numbing medicine into a group of nerves in your neck that control your shoulder and upper arm.
- Compared with having a medicine to make you fall asleep (general anesthetic) alone, the nerve block can lead to better control of pain after surgery and a faster recovery with fewer side effects.
- Your arm may remain numb for several hours or longer after the procedure. You may have to wear a sling to keep your arm safe from injury while it is numb and to support your arm after surgery.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

After Surgery General Patient Instructions

Bill Bragg, M.D. M.B.A
Orthopedic Surgery
Mercy Medical Group
Phone: 916.733.5700
Fax: 916.733.5714

Although surgery is painful, it is expected that your pain will gradually decrease following surgery. If your pain becomes difficult to control, or you notice increasing redness, drainage, or swelling, please contact our office immediately. We can be reached as per the below:

NAME: **MILLSDIXON, ANGELA D**
MRN: 01274297(M); 0000112966(AMB)

Acct #: 215369653(M)
Pt Loc: MGH SUR

DOB: 8/4/1956 Age: 67 years Sex: F
Admit Date: 3/19/2024
Disch Date: 3/19/2024
Physician: Bragg, William E MD

Patient Education/Depart Summary

- During the day, please call the Orthopedic Surgery Clinic at 916.733.5700 with any questions or concerns.
- After hours, you may call the same number and a member of the Answering Service will help resolve your issue and route the call appropriately to the On Call Provider.
- If you are in need of pain medication, please call us when you are running low (before you run out), because refills may take time to process. It may take up to 72 hours for a refill. Please review the Narcotic Medication Policy handout for guidance (given with pre-operative paperwork).

In case of an emergency, please go to the Emergency Room for evaluation. Chest pain, shortness of breath, uncontrollable bleeding, loss of consciousness, worsening numbness and tingling, inability to move the affected area, or any other concerning symptoms warrant a visit to the Emergency Room immediately.

What to Expect After Rotator Cuff Repair:

You should wear the sling 95% of the day for the first 5 weeks after surgery. This is necessary to protect the repair, which is critical for proper healing. You should also be sleeping in the sling for the first 5 weeks after surgery. If you use your shoulder too soon, you can re-tear the repair!

During the first 5 weeks, you can come out of the sling to get dressed, and to shower. But no active motion of the shoulder, such as reaching outwards or upwards, is allowed. For example, no motion such as required to wash your hair, do laundry, washing dishes, or cleaning a window with the arm. You may move your wrist and elbow but not the shoulder. You should not drive a car while wearing the sling. You can use a computer while in the sling.

NAME: **MILLSDIXON, ANGELA D**

DOB: 8/4/1956 Age: 67 years Sex: F
Admit Date: 3/19/2024
Disch Date: 3/19/2024
Physician: Bragg, William E MD

Patient Education/Depart Summary

You can shower with the Aquacel dressing on your shoulder. To shower, you should remove the sling, let the arm dangle down, and bend forward to clean under the arm with the opposite hand. The dressing should be waterproof. If the dressing does get wet or soiled underneath, it may be removed and replaced with adhesive bandages / Band-Aids.

The original dressing should be removed after the third day following surgery. Leaving it on too long may cause skin irritation. There may be glue on your skin underneath the dressing. Do not remove the glue or any sutures. You can replace the dressing with dry, clean gauze dressings after day 3. After those first three days, it is okay to shower directly over the incision(s) but do not fully immerse or soak (do not take a bath).

Until we see you in clinic and clear you for activity, no exercise to the surgical shoulder (no pendulums, stretches, band exercises etc.).

In addition to any narcotic medications you have been prescribed, you may restart any anti-inflammatory medication (e.g. ibuprofen, naproxen, etc.) unless otherwise instructed.

Time to recovery:

Time off of work usually is between 2 weeks to greater than 3 months, depending on the nature of the job. No heavy lifting with the arm (>15 pounds) for the first 5 months after surgery.

Pain should be markedly reduced by 3-6 months after surgery, and your ability to reach vertically overhead is usually achieved by approximately 6 months after surgery. Patients can continue to improve with regard to motion and pain, up to one year after surgery.

I, ANGELA MILLS DIXON , understand that Mercy General Hospital is not responsible for any personal belongings/effects or valuables that have not been identified on the valuable and belonging list. Any personal effects brought into the facility and not recorded on the valuables and belongings form are the responsibility of the patient/family/significant other.

Medical Decision Making

67-year-old female who presents with diffuse body pain s/p motor vehicle collision that occurred yesterday around 1900. Patient reports that she was the restrained driver in the accident. She was hit on the driver side and her airbags deployed. She denies LOC or head injury at time of accident. Now she is complaining of bilateral shoulder pain, worse in the left shoulder, as well as left knee pain, chest pain, and neck pain. Reports pain when taking a deep breath.

Patient is nontoxic-appearing upon arrival in ED with stable vital signs, no fever or hypoxia. CT C-spine results show no evidence of acute fracture or traumatic malalignment of the cervical spine. X-ray of the left shoulder reveals severe acromioclavicular degenerative changes but no signs of acute bony abnormalities or fracture. No evidence of rib fracture on x-ray. There are also no acute bony abnormalities of the left knee. Patient updated on results and all questions and concerns addressed. Recommend patient follow-up with PCP for referral for MRI of the shoulder if symptoms persist. Discussed strict ED return precautions. Patient given Toradol injection during ED stay and reports improvement of symptoms upon reevaluation. Patient is agreeable with plan for discharge at this time and outpatient follow-up.

Differential Diagnosis

Motor vehicle collision injury, fracture, sprain, strain, internal organ injury, contusion

Final Diagnosis

Diagnosis this visit:

Motor vehicle collision (V87.7XXA) 08/26/2023 13:40 Discharge

Left knee pain (M25.562) 08/26/2023 13:40 Discharge

Left shoulder pain (M25.512) 08/26/2023 13:40 Discharge

Neck pain (M54.2) 08/26/2023 13:41 Discharge

SAFE PAIN MEDICINE PRESCRIBING

We care about you. Our goal is to treat your medical conditions, including pain, effectively, safely and in the right way.

Pain relief treatment can be complicated. Mistakes or abuse of pain medicine can cause serious health problems and death.

Our emergency department will only provide pain relief options that are safe and correct.

For your SAFETY, we routinely follow these rules when helping you with your pain.

1. We look for and treat emergencies. We use our best judgement when treating pain. These recommendations follow legal and ethical advice.
2. You should have only ONE provider and ONE pharmacy helping you with pain. We do not usually prescribe pain medication if you already receive pain medicine from another health care provider.
3. If pain prescriptions are needed for pain, we will only give you a limited amount.
4. We do not refill stolen or lost prescriptions for pain medication.
5. We do not prescribe long-acting pain medicines such as: OxyContin, MSContin, Fentanyl (Duragesic), Methadone, Opana ER, Exalgo, and others.
6. We do not provide missed doses of Methadone.
7. We do not usually give shots for flare-ups of chronic pain.

Discharge Instructions

8. Health care laws, including HIPAA, allow us to ask for all of your medical records. These laws allow us to share information with other health providers who are treating you.
9. We may ask you to show a photo ID when you receive a prescription for pain medicines.
10. In California, we use the California Prescription Drug Monitoring Program called CURES. In Arizona and Nevada, we use the Prescription Monitoring Program that has oversight by the Arizona and Nevada state boards of pharmacy. These statewide computer systems track opioid pain medications and other controlled substance prescriptions.

If you need help with substance abuse or addiction, please call **1-800-662-HELP (4357)** for confidential referral and treatment.

Follow-up Instructions:

All referrals for follow up medical care may require approval by your insurance carrier. Any provider contact information (below) is provided to assist you in getting the follow up we recommend. However, it's important that you first check with your insurance provider to assure that the provider is in your network and such a visit will be covered. Some plans may require a Primary Care doctor to provide a referral for specialist appointments.

You May Need to Schedule the Following Appointments

Follow Up with Return to ED if
symptoms worsen

When

Follow Up with Follow up with
primary care provider

When Within 1 to 2 days

We encourage you to sign up for My Portal, where you can easily access your medical records and test results from all Dignity Health care centers.

Please sign up in one of the following ways:

1. Email invitation. You may have a message in your inbox. Please click the link provided to create an account. **OR**

2. Request an invitation at your next clinic or hospital visit. Please ask a staff member and they will be happy to assist you.

Motor Vehicle Collision Injury, Adult

After a car accident (motor vehicle collision), it is common to have injuries to your head, face, arms, and body. These injuries may include:

- Cuts.
- Burns.
- Bruises.
- Sore muscles or a stretch or tear in a muscle (strain).
- Headaches.

You may feel stiff and sore for the first several hours. You may feel worse after waking up the first morning after the accident. These injuries often feel worse for the first 24–48 hours. After that, you will usually begin to get better with each day. How quickly you get better often depends on:

- How bad the accident was.
- How many injuries you have.
- Where your injuries are.
- What types of injuries you have.
- If you were wearing a seat belt.
- If your airbag was used.

A head injury may result in a concussion. This is a type of brain injury that can have serious effects. If you have a concussion, you should rest as told by your doctor. You must be very careful to avoid having a second concussion.

Follow these instructions at home:

Medicines

- Take over-the-counter and prescription medicines only as told by your doctor.
- If you were prescribed antibiotic medicine, take or apply it as told by your doctor. **Do not** stop using the antibiotic even if your condition gets better.

If you have a wound or a burn:

NAME: **MILLSDIXON, ANGELA D**
 MRN: 01274297(M); 0000112966(AMB)

Acct #: 214881013(M)

Admit Date: 8/26/2023

Disch Date: 8/26/2023

Physician: Wostak, Matthew MD

Discharge Instructions

Normal
wound

Infected
wound

- Clean your wound or burn as told by your doctor.
 - Wash it with mild soap and water.
 - Rinse it with water to get all the soap off.
 - Pat it dry with a clean towel. **Do not** rub it.
 - If you were told to put an ointment or cream on the wound, do so as told by your doctor.
- Follow instructions from your doctor about how to take care of your wound or burn. Make sure you:
 - Know when and how to change or remove your bandage (dressing).
 - Always wash your hands with soap and water before and after you change your bandage. If you cannot use soap and water, use hand sanitizer.
 - Leave stitches (sutures), skin glue, or skin tape (adhesive) strips in place, if you have these. They may need to stay in place for 2 weeks or longer. If tape strips get loose and curl up, you may trim the loose edges. **Do not** remove tape strips completely unless your doctor says it is okay.
- **Do not:**
 - Scratch or pick at the wound or burn.
 - Break any blisters you may have.
 - Peel any skin.
- Avoid getting sun on your wound or burn.
- Raise (elevate) the wound or burn above the level of your heart while you are sitting or lying down. If you have a wound or burn on your face, you may want to sleep with your head raised. You may do this by putting an extra pillow under your head.
- Check your wound or burn every day for signs of infection. Check for:
 - More redness, swelling, or pain.
 - More fluid or blood.
 - Warmth.
 - Pus or a bad smell.

Discharge Instructions

Activity

- Rest. Rest helps your body to heal. Make sure you:
 - Get plenty of sleep at night. Avoid staying up late.
 - Go to bed at the same time on weekends and weekdays.
- Ask your doctor if you have any limits to what you can lift.
- Ask your doctor when you can drive, ride a bicycle, or use heavy machinery. **Do not** do these activities if you are dizzy.
- If you are told to wear a brace on an injured arm, leg, or other part of your body, follow instructions from your doctor about activities. Your doctor may give you instructions about driving, bathing, exercising, or working.

General instructions

- If told, put ice on the injured areas.
 - Put ice in a plastic bag.
 - Place a towel between your skin and the bag.
 - Leave the ice on for 20 minutes, 2–3 times a day.
- Drink enough fluid to keep your pee (urine) pale yellow.
- **Do not** drink alcohol.
- Eat healthy foods.
- Keep all follow-up visits as told by your doctor. This is important.

Contact a doctor if:

NAME: **MILLSDIXON, ANGELA D**
MRN: 01274297(M); 0000112966(AMB)

Acct #: 214881013(M)

Admit Date: 8/26/2023
Disch Date: 8/26/2023
Physician: Wostak, Matthew MD

Discharge Instructions

- Your symptoms get worse.
- You have neck pain that gets worse or has not improved after 1 week.
- You have signs of infection in a wound or burn.
- You have a fever.
- You have any of the following symptoms for more than 2 weeks after your car accident:
 - Lasting (chronic) headaches.
 - Dizziness or balance problems.
 - Feeling sick to your stomach (nauseous).
 - Problems with how you see (vision).
 - More sensitivity to noise or light.
 - Depression or mood swings.
 - Feeling worried or nervous (anxiety).
 - Getting upset or bothered easily.
 - Memory problems.
 - Trouble concentrating or paying attention.
 - Sleep problems.
 - Feeling tired all the time.

Get help right away if:

- You have:
 - Loss of feeling (numbness), tingling, or weakness in your arms or legs.
 - Very bad neck pain, especially tenderness in the middle of the back of your neck.
 - A change in your ability to control your pee or poop (stool).
 - More pain in any area of your body.
 - Swelling in any area of your body, especially your legs.
 - Shortness of breath or light-headedness.
 - Chest pain.
 - Blood in your pee, poop, or vomit.
 - Very bad pain in your belly (abdomen) or your back.
 - Very bad headaches or headaches that are getting worse.
 - Sudden vision loss or double vision.
- Your eye suddenly turns red.
- The black center of your eye (pupil) is an odd shape or size.

Patient Education/Depart Summary

Patient Education Materials:

MILLSDIXON, ANGELA DENISE has been given the following patient education materials:

Emergency Medicine

Motor Vehicle Collision Injury, Adult

After a car accident (motor vehicle collision), it is common to have injuries to your head, face, arms, and body. These injuries may include:

- Cuts.
- Burns.
- Bruises.
- Sore muscles or a stretch or tear in a muscle (strain).
- Headaches.

You may feel stiff and sore for the first several hours. You may feel worse after waking up the first morning after the accident. These injuries often feel worse for the first 24–48 hours. After that, you will usually begin to get better with each day. How quickly you get better often depends on:

- How bad the accident was.
- How many injuries you have.
- Where your injuries are.
- What types of injuries you have.
- If you were wearing a seat belt.
- If your airbag was used.

A head injury may result in a concussion. This is a type of brain injury that can have serious effects. If you have a concussion, you should rest as told by your doctor. You must be very careful to avoid having a second concussion.

Follow these instructions at home:

Medicines

- Take over-the-counter and prescription medicines only as told by your doctor.
- If you were prescribed antibiotic medicine, take or apply it as told by your doctor. **Do not** stop using the antibiotic even if your condition gets better.

NAME: **MILLSDIXON, ANGELA D**

Physician: Wostak, Matthew MD

Patient Education/Depart Summary

If you have a wound or a burn:

Normal
wound

Infected
wound

- Clean your wound or burn as told by your doctor.
 - Wash it with mild soap and water.
 - Rinse it with water to get all the soap off.
 - Pat it dry with a clean towel. **Do not** rub it.
 - If you were told to put an ointment or cream on the wound, do so as told by your doctor.
- Follow instructions from your doctor about how to take care of your wound or burn. Make sure you:
 - Know when and how to change or remove your bandage (dressing).
 - Always wash your hands with soap and water before and after you change your bandage. If you cannot use soap and water, use hand sanitizer.
 - Leave stitches (sutures), skin glue, or skin tape (adhesive) strips in place, if you have these. They may need to stay in place for 2 weeks or longer. If tape strips get loose and curl up, you may trim the loose edges. **Do not** remove tape strips completely unless your doctor says it is okay.
- **Do not:**
 - Scratch or pick at the wound or burn.
 - Break any blisters you may have.
 - Peel any skin.
- Avoid getting sun on your wound or burn.
- Raise (elevate) the wound or burn above the level of your heart while you are sitting or lying down. If you have a wound or burn on your face, you may want to sleep with your head raised. You may do this by putting an extra pillow under your head.
- Check your wound or burn every day for signs of infection. Check for:
 - More redness, swelling, or pain.
 - More fluid or blood.
 - Warmth.

Physician: Wostak, Matthew MD

Patient Education/Depart Summary

- Pus or a bad smell.

Activity

- Rest. Rest helps your body to heal. Make sure you:
 - Get plenty of sleep at night. Avoid staying up late.
 - Go to bed at the same time on weekends and weekdays.
- Ask your doctor if you have any limits to what you can lift.
- Ask your doctor when you can drive, ride a bicycle, or use heavy machinery. **Do not** do these activities if you are dizzy.
- If you are told to wear a brace on an injured arm, leg, or other part of your body, follow instructions from your doctor about activities. Your doctor may give you instructions about driving, bathing, exercising, or working.

General instructions

- If told, put ice on the injured areas.
 - Put ice in a plastic bag.
 - Place a towel between your skin and the bag.
 - Leave the ice on for 20 minutes, 2–3 times a day.
- Drink enough fluid to keep your pee (urine) pale yellow.
- **Do not** drink alcohol.
- Eat healthy foods.
- Keep all follow-up visits as told by your doctor. This is important.

Contact a doctor if:

Patient Education/Depart Summary

- Your symptoms get worse.
- You have neck pain that gets worse or has not improved after 1 week.
- You have signs of infection in a wound or burn.
- You have a fever.
- You have any of the following symptoms for more than 2 weeks after your car accident:
 - Lasting (chronic) headaches.
 - Dizziness or balance problems.
 - Feeling sick to your stomach (nauseous).
 - Problems with how you see (vision).
 - More sensitivity to noise or light.
 - Depression or mood swings.
 - Feeling worried or nervous (anxiety).
 - Getting upset or bothered easily.
 - Memory problems.
 - Trouble concentrating or paying attention.
 - Sleep problems.
 - Feeling tired all the time.

Get help right away if:

- You have:
 - Loss of feeling (numbness), tingling, or weakness in your arms or legs.
 - Very bad neck pain, especially tenderness in the middle of the back of your neck.
 - A change in your ability to control your pee or poop (stool).
 - More pain in any area of your body.
 - Swelling in any area of your body, especially your legs.
 - Shortness of breath or light-headedness.
 - Chest pain.
 - Blood in your pee, poop, or vomit.
 - Very bad pain in your belly (abdomen) or your back.
 - Very bad headaches or headaches that are getting worse.
 - Sudden vision loss or double vision.
- Your eye suddenly turns red.
- The black center of your eye (pupil) is an odd shape or size.

Patient Education/Depart Summary

- After a car accident (motor vehicle collision), it is common to have injuries to your head, face, arms, and body.
- Follow instructions from your doctor about how to take care of a wound or burn.
- If told, put ice on your injured areas.
- Contact a doctor if your symptoms get worse.
- Keep all follow-up visits as told by your doctor.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

Computerized Tomography

PROCEDURE	ACCESSION	EXAM DATE/TIME	STATUS	ORDERING PROVIDER
CT C Spine wo Con	14-CT-23-425968	8/26/2023 10:51 PDT	Auth (Verified)	Zea,Madeline PA

Reason For Exam
(CT C Spine wo Con) C-spine tenderness

Report

EXAM: CT Cervical Spine without contrast

EXAM DATE: 8/26/2023 10:39 AM PDT

HISTORY: C-spine tenderness;

COMPARISON: None available.

PROCEDURE: Thin section contiguous tomographic axial images were obtained throughout the cervical spine with sagittal and coronal reconstructions without IV contrast.

RADIATION DOSE: CTDI Vol (mGy):DLP (mGy-cm)

FINDINGS:

Exam quality: Adequate

No acute fracture, malalignment or focal osseous destruction. Craniocervical junction maintained. No prevertebral soft tissue swelling. Cervical spine degenerative changes. Mild straightening of the normal cervical lordosis likely positional.

Upper thoracic levels: within normal limits as visualized.

Incidental Findings: No cervical adenopathy. No thyroid masses or nodules. Skull base is unremarkable. No swelling or fluid in the prevertebral soft tissues.

Please note this examination does not assess for ligamentous injury or stability.

IMPRESSION:

1. No acute fracture or traumatic malalignment within the cervical spine.
